

### Visual Impacts

This discussion should include an assessment of the visual impacts of the proposed action, including the "view from the road" and the "view of the road." Where relevant, the document should discuss the consideration given to design quality, art, and architecture in the project planning. These values may be particularly important for facilities located in sensitive urban settings. Where relevant, the draft EIS should be circulated to officially designated state and local arts councils and, as appropriate, other organizations with an interest in design, art, and architecture.
